Fact   Attack Object Database is Corrupted

Symptoms

Attackobject update downloads but fails to Compile.

Solution

1. Backup the existing /usr/idp/mgt-svr/var/accounts/1/objects/attackobj.set file
2. Stop the IDP Management Processes
   /etc/init.d/mgtSvr stop
3. Create a new file /usr/idp/mgt-svr/var/accounts/1/objects/attackobj.set and enter the below details in the file & save the file

```
(attackobj
      : (__root
            :rectype (group)
            :id (0)
            :type (group)
            :attacks (
                  : (CRITICAL)
                  : (HIGH)
                  : (INFO)
                  : (LOW)
                  : (MEDIUM)
                  : ("Predefined Dynamic Groups")
                  : ("group name")
            )
            :displayName ("Attack Objects")
            :comment ()
      )
)
```

4. Change the ownership of the attackobj.set file to idp:idp
   `chown idp:idp attackobj.set`
5. Change the permissions of the file
   `chmod 644 attackobj.set`
6. Start the Management Server
   `/etc/init.d/mgtSvr start`
7. Update the attack objects
