# 128T Zscaler Release Notes

## Special Considerations

After upgrading to this version, a 128T service restart will be needed on the conductor. Note: If this is an HA conductor, restart the backup (non-primary) conductor node first, wait until all processes are running and then restart the primary conductor node.

```
systemctl restart 128T
```

## Issues Fixed

- **PLUGIN-135** Resolved incompatible inclusion of dependent package version which would result in asset failures with the message:

```
Plugins highstate: ["No matching sls found for '_states' in env  
'plugins'"].
```
